**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to an isolated polypeptide of SEQ ID NO: 2, classified in class 530, subclass 350.
- II. Claim 5, drawn to an antibody to VSHK-1 polypeptide, classified in class 530, subclass 387.1.
- III. Claims 6-13, drawn to an isolated nucleic acid of SEQ ID NO: 1, a vector and a host cell, classified in class 435, subclass 69.1.
- IV. Claim 16, drawn to a method of hybridization, classified in class 435, subclass 6.
- V. Claim 17, drawn to a method of identifying a protein that binds VSHK-1, classified in class 435, subclass 7.8.
- VI. Claims 18-20, drawn to a method of compound identification, classified in class 435, subclass 7.2.
- VII. Claims 14-15, drawn to a method of detecting a VSHK-1 polypeptide, classified in class 435, subclass 7.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are independent and distinct, each from the other, because they are products which possess characteristic differences in structure and function, and each has an independent utility, that is distinct for each invention which cannot be exchanged.

Art Unit: 1646

Inventions IV-VII are independent and distinct, each from the other, because the methods are practiced with materially different starting materials, have materially different process steps, and are for materially different purposes.

Inventions III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the nucleic acid of invention III can be used to produce a polypeptide.

Inventions I and (VI-V) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the polypeptide of invention I can be used for the production of protein.

Inventions II and VII are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the antibody of invention II can be used for the isolation of the polypeptide.

Art Unit: 1646

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
